Procedure for Installing PC DNC Editor on Windows 7 Computer

Login as Administrator or a User who has Administrator rights.

Important: On Windows 7 or Windows 8 computers, we recommend that you turn User Account Control off while you install the software. You can go back in after installing the software and turn it on if you need to have it on. If you must keep User Account Control on, it is very important to right click on the PC DNC Editor shortcut on the desktop before running it the first time and choose RUN AS ADMINISTRATOR. If you are not using User Account Control, you do not need to perform this step. To see if you are using User Account Control, go to Control Panel, System & Security, Action Center, Change User Account Control Settings. Move bar all the way to bottom to turn it off.

If using the downloaded executable from the Website, run Setup_Editor 4.0.x.exe as normal.

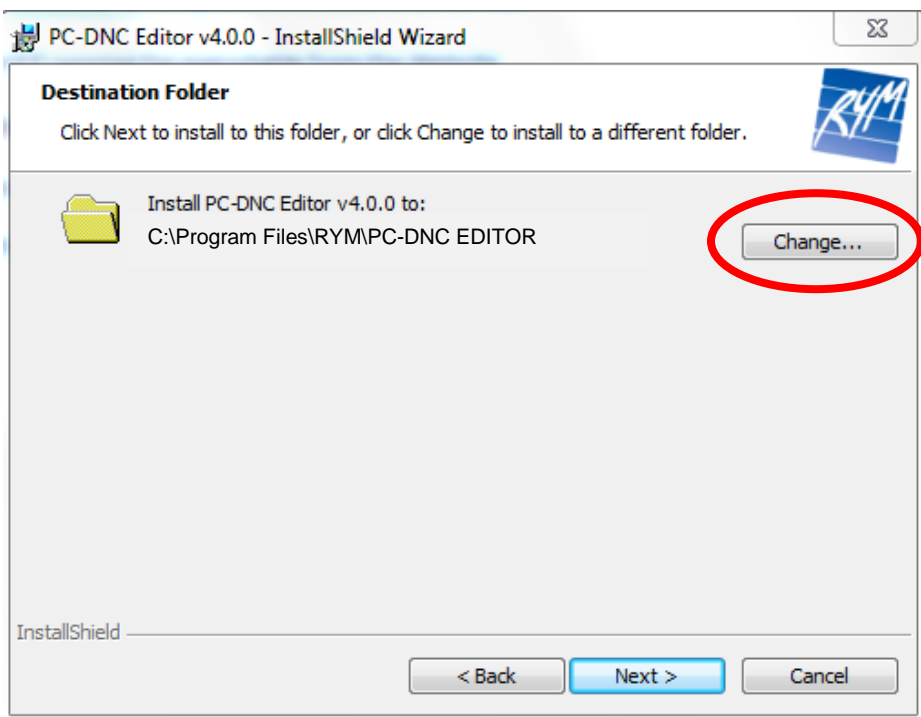

Enter the password (editor48747)

If running installation from the CDROM, click on PC DNC Editor, then click Install Application at bottom left of screen.

Click NEXT at Installshield Wizard

Enter name, company name and whether installation is for all users for just currently logged in user

Click CHANGE button Destination Folder screen

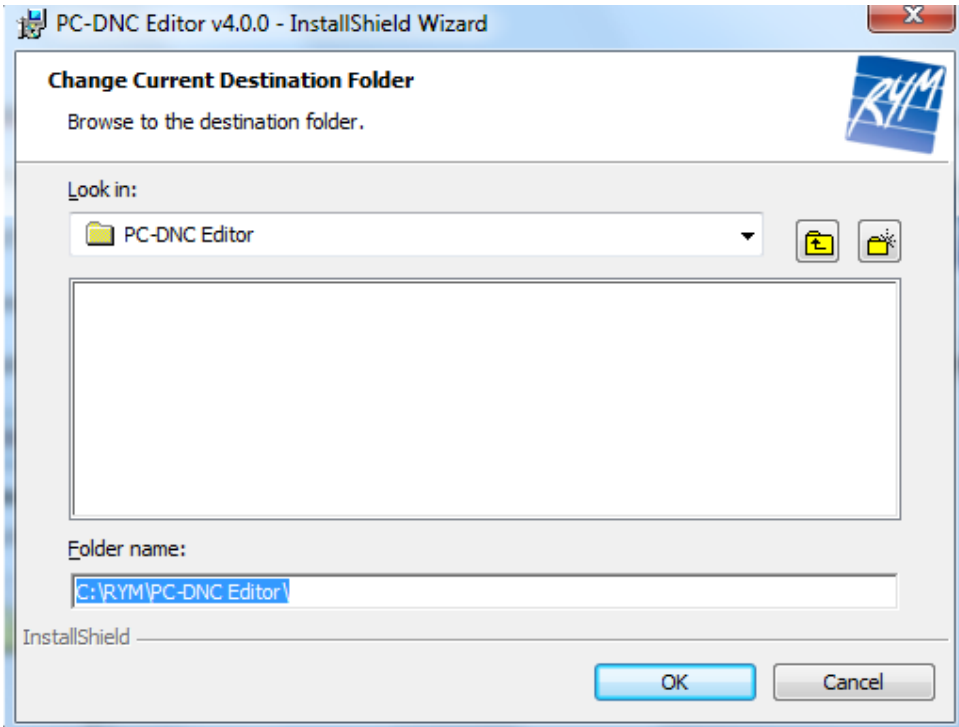

PC-DNC FAQs

Making our customers' lives easier.

Change the Folder Name to:

C:\RYM\PC-DNC Editor

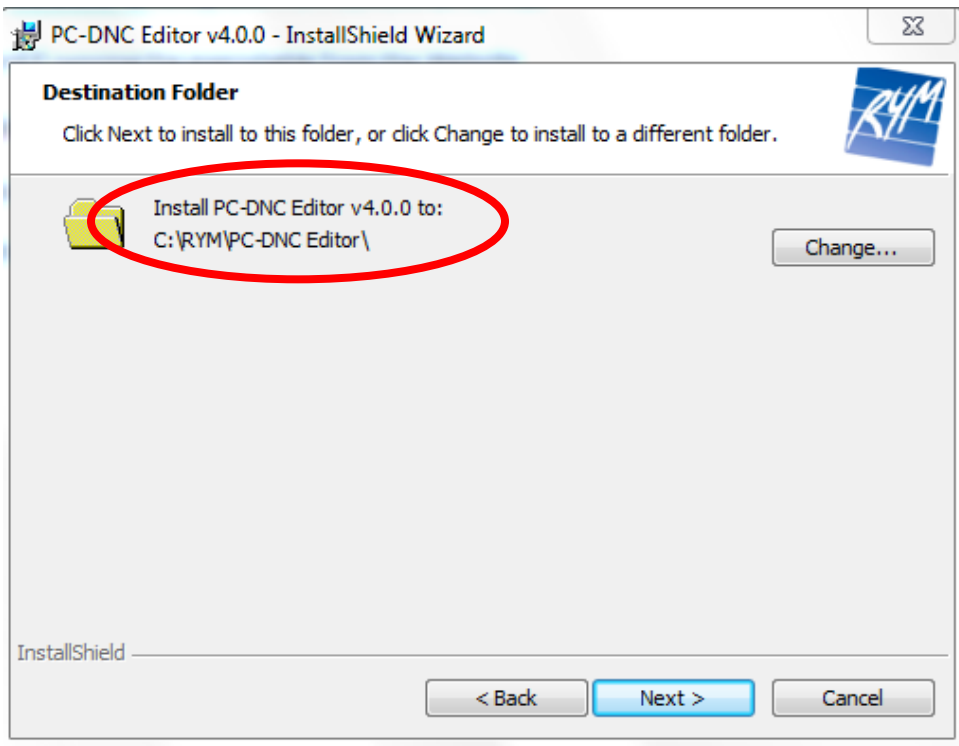

Click OK

Confirm that the screen is showing C:\RYM\PC-DNC Editor as the Destination Folder.
